## Medication Side Effect Report

**Patients Name:** John Doe

**Date of Birth:** 8/22/1977

John Doe is currently being evaluated and treated for a chief complaint of headaches. In an effort to determine the etiology of Mr. Doe's complaint an analysis of their prescription medications for possible musculoskeletal side effects was performed. It is well known and documented that medication side effects can manifest as musculoskeletal complaints and therefore may be a causative factor in the patient's current presentation. It should be known that Mr. Doe is taking the following medications, which may result in the listed side effects.

Drug Name	MSK Side Effects
Celexa	(Headache) is not a known side effect.
Hydrochlorothiazide (HCTZ)	Headache
Lipitor	Headache
Metformin	Headache
Motrin	(Headache) is not a known side effect.
Synthroid	Headache
Synthroid	Headache-(Severe)

If Mr. Doe's current complaints overlap with any of the potential side effects listed above it is advised that the patient communicate this information with the prescribing medical provider to discuss these potential interactions.

**Reviewed with the patient by:** Dr. Palmer
